

TEST Lack of validation in email field on workspace invitation

Test Case ID: Workspace-001 **Title:** Verify email field in workspace invitation rejects input exceeding maximum allowed length.

Feature: Workspace Invitation / Email Field Validation **Type:** Boundary Analysis, Negative **Priority:** Medium **Status:** Fail

Created By: Demirhan Yalcin **Date:** 22/03/2026 **Environment:** Chrome 122, Windows 10, Desktop

Preconditions

User is logged in with an active account that has admin rights to invite new members to the workspace.

Steps

1. Open navigation bar.
2. Click "Invite collaborators" button located in the bottom of the navigation bar.
3. Click "+ Invite" button located in right top of the screen with black background.
4. Enter an email address containing all necessary elements such as '@' and '.com' but with a domain part exceeding 320 characters total.
5. Select organization role of the user, e.g "Organization Admin".
6. Select workspace you want to invite this person to.
7. Select workspace role of this person, e.g "Product Manager".
8. Click "Send Invite" button located in right bottom of the modal screen.
9. Observe the email field and UI layout after submission.

Expected Result

The application should display a validation error indicating the email address exceeds the maximum allowed length of 320 characters. The invitation should not be sent and the UI layout should remain intact with all columns visible without horizontal scrolling.

Actual Result

The application accepted the unrealistically long email address and sent the invitation successfully. UI elements including Status and Actions columns shifted far to the right, becoming inaccessible without horizontal scrolling. No validation error appeared.

Notes

Related bug report: Workspace-001, Unrealistically long email input in workspace invitation breaks UI layout and shifts action elements out of view.
