

TEST Persona Textfield Validation

Test Case ID: Persona-001 **Title:** Verify persona title and description fields reject extremely large text input.

Feature: Building Blocks / Persona Create & Edit **Type:** Boundary Analysis, Negative **Priority:** High **Status:** Fail

Created By: Demirhan Yalcin **Date:** 12/03/2026 **Environment:** Chrome 122, Windows 10, Desktop

Preconditions

User is logged in with an active account that has permissions to create and edit personas in the workspace.

Steps

1. Navigate to Building Blocks -> Personas.
2. Create a new persona or edit an existing one.
3. Navigate to a lorem ipsum generator and copy a minimum of 5MB of text.
4. Paste the copied text into the title field.
5. Click Save.
6. Open DevTools and navigate to Network tab.
7. Filter by api.theydo.com and observe the payload size in the UpdatePersona request.
8. Repeat steps 3 to 7 for the description field.

Expected Result

Frontend validation should prevent submission of extremely large text input. An error message should appear informing the user the input exceeds the allowed length. The API request should not be sent with an oversized payload.

Actual Result

No validation error appeared. The application accepted and submitted extremely large text in both title and description fields. The UpdatePersona API request was sent with a payload exceeding 15MB without any restriction.

Notes

Related bug report: Persona-001, There is no frontend validation in description and title on persona create/edit. Also check other rich text fields across the application as the same issue may exist elsewhere.
